

Name: Judy Fitzgerald

Title: Ms.

Organization: WNYCAC

County: Erie

Comment: I thank you for taking these comments. It is vital to adopt alternative energy such as wind and solar. We should not be supporting dirty coal and any fossil fuel development. One the most important actions that we all can take is energy conservation which does not cost money, but saves it. Weatherization of houses and efficiency in gas mileage are also important. We must reduce are carbon production. Also the exploitation of the Marcellus shale must be not looked at as a gold mine, but how is the drilling going to effect the environment? We have a responsibility to reduce carbon output or suffer the severe consequences. Thank you for your attention. Judy Fitzgerald
