Title: md

Organization: citizen

County: Saratoga

Comment: Renewable clean energy is essential for NYS to develop for economic growth and Geopolitical security. We must have diverse energy sources so as not to have to rely only on fossil fuels. NYS has a mix of superb colleges, manufacturing and transportation, especially upstate to support an initiative for innovation and manufacturing of these high technology energy sources which would help NY to become a world class economic force. I read that Germany and China are leading the world in using wind power- allowing them to take the lead would be a wasted opportunity. I support this Energy plan completely.
