

Dec 15, 2008

Dear Paul De Cotis

I support + demand that clean energy be given priority during the stages leading up to a finalized Energy Plan for our state.

I may put more effort into recycling + conservation than most. I am not a passive voice in this process.

- Wind energy. I have visited the wind farms of Madison county + find them majestic. Remember the old mills of Holland decorate formal dinnerware now.
- Solar: I have read in AAAS's Science magazine that the unit area of energy collected ^{needed} has been dramatically improved (reduced) by addition of thin layers that capture secondary emission of usable photons. Support this industry!!
- Mercury contamination, acid rain + air pollution ^{health} have too long been supported at our expense, by using coal.
- The problem of radioactive waste is too serious to encourage it as an alternative.
- Support conservation measures

Thank you,

Melany T. Hale
