

Name: Marilyn Gold

Title: na

Organization: na

County: Delaware

Comment: The EPA in Montana has declared toxins in waters as a result of Hydrofracking. Once the toxins are in the water, it'll be generations before it can be clean and potable. Let's be the State that approaches this energy need in a healthy sane and sound way and wait until technology is such that hydrofracking is 100% safe (not even 95%).
