Comment: The liquid Natural Gas project to be built off of NYC shoreline is for foreign gas. Please do not glance over the details under the assumption that the gas is to be generated on US soil and held in these tanks. It is for the IMPORT of liquid gas from South America and other countries. Also it will decimate the only natural reef off of NYC, There has been NO true impact study of how this might effect the bird and fish life in that area. The study that LNG uses is flawed and out of date. SAY NO TO LNG
