Comment: Right now we have such a surplus of natural gas in this country that there is no need to bring in LNG (Liquified Natural Gas) from other countries. Not only is it feeding our addiction for foreign fossil fuels, but it is a dirty fossile fuel. LNG IS DIRTY! By the time you drill it, freeze it, ship it, convert it back to a gas, and then build all these off shore ports to receive LNG, the carbon footprint is tremendous. These LNG companies want to industrialize the entire coastline of America. And it's disgusting. Just look at this map of proposed and existing LNG ports. Click the link to see the map. <http://www.ferc.gov/industries/lng/indus-act/terminals/exist-prop-lng.pdf> Yes we need energy, but LNG is not the answer! Please say no to LNG! Thank you, Richard Livsey
