

Name: Kevin Millar

Title: President

Organization: ORBC

County: Tioga

Comment: I am very concerned about the effect that gas drilling in the Marcellus Shale bed using horizontal hydraulic fracturing. It will make any area that is good for drilling a sacrificial energy zone. There is little difference between the process used to extract tight gas and mountain top removal coal mining. Conservation has been understated as a means to balance supply and demand. We will have to conserve eventually, so why not start now.
