Comment: To The State Energy Board, Thank you for finally taking up this important matter. I am writing to let you know that, as a New York State resident, I want an energy plan that incorporates the use of solar photovoltaics and solar thermal equipment. No Nukes. New York can no longer afford to implement renewable energy in baby steps. We need to take mature leaps to fix our economy, environment and broken power production system. Many advocates are calling for 2,000 MW of solar by 2020. Incredibly easy to accomplish, this new energy plan's a bit more worthy of the human race and its "constituents." A well-designed 2,000 MW solar program can be implemented for as little as \$0.82 in residential rate payer impacts a month and deliver more than \$10 billion dollars in economic output. As a New Yorker I strongly support this investment and even more strongly urge you to incorporate a comprehensive solar program, of at least 2,000 MW by 2020, as part of your State Energy Plan. This kind of plan, more appropriately, serves the vast majority of the people and the world and not merely the puny minority "investors" that like to think of themselves as larger, and more important, than Life itself. Thanks for this opportunity to comment.
