

Name: Ann Schongalla

Title: M.D.

Organization: private citizen

County: Westchester

Comment: New York State should press dead ahead on energy efficient, renewable broad-based sources, such as solar photovoltaics and solar thermal equipment as well as wind power. There is no sense in waiting and initiatives will only cost more in the future. Programs should include incentives for individuals, businesses, and government-sponsored initiatives/participation. Water saving initiatives should be part of resource management as well as energy saving initiatives at home and at work (programmable thermostats, turning off LED, etc). PLEASE pursue a sophisticated, cutting edge technology program to ensure New York's future viability.
