Dear Board Members, As attendees of the Public Hearing which took place at Brooklyn College yesterday we would like to submit several comments which we believe will facilitate expansion of Energy Efficiency Program throughout NYS. We applaud the State for a great initiative to make general public an active participant in energy savings. Part of the plan was talking about involving ethnic communities whose native language is other than English. Particularly, we would like to talk about Russian community which spreads throughout the Tri-State area and out of which about 80% resides in New York State. To our estimation (based on Department of Energy statistics) Russian Speaking home owners occupy about 200,000 one to four family homes in New York city alone. Based on the same statistics average household energy consumption for heating is 201 billion BTU's per household (or 40.2 trillion BTU's total) which translates into \$2,414.08 annually per household. Being a BPI Certified Envelope Professional company we are confident that we can save 16.08 trillion BTU's total or \$193,126,400 annually. We need your help to make Russian community aware of Energy Efficiency Program and save people and New York State much needed budget dollars which can be used for other State needs. Russian Community, as any other ethnic community, is developing within itself. If You will help us create ONE energy efficient community in NYS, other communities will follow!!! Please contact us for a detailed proposal. Thank you for you wonderful work! Team of TURN HOME GREEN
