

Name: Gary A Dupree

Title: Mr.

Organization: Vestal Coalition

County: Broome

Comment: I believe that the state energy plan should include production of natural gas in the Marcellus Shale right here in our own state. Much of the natural gas NY uses is imported from other states or even from other counties. We have an abundant supply right here and it will keep money flowing into our local economies that will help all of NY for several generations. NY should impliment the "Pickens Plan" for energy independance to help us keep from importing oil from the middle east and other areas that may not have good intentions for our country.
