

Name: Mary Davis

Title: EcoPerspectives, a project of Earth Island Institute

Organization: Director

County: Essex

Comment: I urge the state to shut down the Indian Point nuclear power plant, which poses an unacceptable risk to the residents of the New York City metropolitan area and, also, because radioactivity can be transmitted by air currents, to residents of counties to the north of the plant. The 2000 MW of power now generated by Indian Point could be replaced by energy-efficiency measures, including the widespread installation of light-emitting diode (LED) lights.
