

Name: Wendy Brawer

Title: Green Map System

Organization: Director

County: NewYork

Comment: I oppose the relicensing of Indian Point while advocating the use of LED technology to make up for the loss of the 2000Mw of power Indian Point generates. Indian Point has many problems - from leaks to security - and should be phased out very quickly. We need a study demonstrating the potential impact of wide spread use of LEDs will have on electrical consumption in the state of New York. We need more conservation campaigns that help the average New Yorker make the connection between saving energy and saving money, CO2 and other emissions as well as reducing the need for more generation at centralized plants. Most people and business owners do not realize how important this is. Other issues include hydrofracing and the dangerous process of injecting unknown chemicals into our watershed to extract natural gas. Horizontal drilling should be banned. Thank you
