

Name: Michael Abbene

Title: New York State

Organization: Citizen

County: Oneida

Comment: Before any new energy plan is approved the following must be taken into consideration and developed: 1. Because we in the upstate region and are using much less electric power than what is being generated, the excess should be rerouted at its point of origin toward where it is needed. If this cannot be done there is no reason to continue with the plan. 2. The transmission of electricity must be flexible. Power lines whether they be overground or underground are obsolete. We must foster a power system of wireless transmission, possibly via satellite, fiber optics or some other form. Wireless is the key to our future. Thank you,
Michael Abbene, Marcy, NY
