

JANET HASKINS

Wind installations is evaluated by local towns & agencies that have no previous experience with this technology. Bonding is lax or absent. NY DEC Noise Guidance is not a regulatory document/ We should use the World Health Organization Guidance document 35db nighttime. No visual assessment that is regulatory -- Please don't destroy a natural resource like the St. Lawrence waterfront. State energy office no longer exists The PSC's regulations regarding electric utilities do not identify requirements that pertain to wind generation. We need clarification. Please exam these and many other issues that affect the taxpayers, residents, of the Cape Vincent area. We are so concerned that our local officials are benefiting financially and unable to make objective decisions, nor do they want to hear true information. This is about energy -- we need you to regulate the right thing!!
